Build a Tribute Page

**Objective:** Build an app that is functionally similar to <https://tribute-page.freecodecamp.rocks> (<https://tribute-page.freecodecamp.rocks>)

**User Stories:**

1. Your tribute page should have a `main` element with a corresponding `id` of `main`, which contains all other elements
2. You should see an element with an `id` of `title`, which contains a string (i.e. text), that describes the subject of the tribute page (e.g. "Dr. Norman Borlaug")
3. You should see either a `figure` or a `div` element with an `id` of `img-div`
4. Within the `#img-div` element, you should see an `img` element with a corresponding `id="image"`
5. Within the `#img-div` element, you should see an element with a corresponding `id="img-caption"` that contains textual content describing the image shown in `#img-div`
6. You should see an element with a corresponding `id="tribute-info"`, which contains textual content describing the subject of the tribute page
7. You should see an `a` element with a corresponding `id="tribute-link"`, which links to an outside site, that contains additional information about the subject of the tribute page. HINT: You must give your element an attribute of `target` and set it to `_blank` in order for your link to open in a new tab
8. Your `#image` should use `max-width` and `height` properties to resize responsively, relative to the width of its parent element, without exceeding its original size
9. Your `img` element should be centered within its parent element

Fulfill the user stories and pass all the tests below to complete this project. Give it your own personal style. Happy Coding!

**Note:** Be sure to add `<link rel="stylesheet" href="styles.css">` in your HTML to link your stylesheet and apply your CSS
